EDUCATION

Bachelor in Science (B.Sc.) in Electrical and Electronic Engineering (2024)

Khulna University of Engineering &
Technology (KUET), Bangladesh

Department of Electrical and
Electronic Engineering

CGPA: 3.30 out of 4.00

Higher Secondary School Certificate (2018)

Omar Gani M. E. S College,
Chattogram

GPA: 5.00 out of 5.00

Secondary School Certificate (2016)

Chattogram City Corporation
Municipal Model School and College,
Chattogram

GPA: 5.00 out of 5.00

Saikat Chakraborty

OVERVIEW

Aspiring electrical engineer with a keen interest in innovative design and programming. Proficient in electrical systems and a cybersecurity enthusiast.

EXPERIENCE

Incepta Pharmaceuticals Limited

May 2025-Present

Validation Engineer

Primary Responsibilities:

- Conducting IQ, OQ, PQ of equipment and utilities.
- Automating Calibration Certificate and Report generation with Python and VBA Programming.
- Preparation of SOP and CAD Drawings of Load Patterns, Floor Plans etc.
- Overseeing maintenance and ensuring compliance with regulatory standards.

The Case Gambit, EEE Day - KUET

2023

Lead, Team Hattima

- Detailed case analysis and maintaining collaboration among team members.
- Preparation of powerpoint presentation and Online Video Commercial related to the case.
- Coordinating progress and team communication over long distance through online platforms.

Telus International

2023

Search Engine Evaluator

- Working with the wider development team.
- Learning about search patterns at consumer level and assessing search content to ensure the best user experience.

Industrial Attachments

- Industrial visits to power generation (Khulna 225 MW Combined Cycle Power Plant- NWPGCL (2023), Khulna 330 MW Dual Fuel Combined Cycle Power Plant - PDB (2023), Rampal 1320MW Super Thermal Power Plant (2024)) and transmission (230 kV Khulna South Grid Sub Station (2023)) plants.
- Industrial visit to Akij Jute Mills Limited, Khulna (2022).

SOFTWARE SKILLS

- Python
- AutoCAD
- MS Office
- Linux OS
- Adobe Premiere Pro
- MATLAB

LEADERSHIP SKILLS

- Public Speaking
- Team Management
- Event Management
- Empathy
- Agility and Adaptability

ENGINEERING SKILLS

- Designing
- Programming
- Analytical Thinking
- Computer Networking
- R&D

PROJECT

Two Directional Inclinometer

Development of a novel and different approach to measure the inclination of a given platform. The project involved:

- Conceptualizing a electrolytic liquid level sensor to meet the specific requirements.
- Developing detailed CAD models using AutoCAD for accurate representation.
- Programming microcontrollers (Arduino) for monitoring orientation, transducing and displaying the measurements.
- Hacking a cheap but effective implementation using commercially available low cost materials such as table tennis balls.

THESIS

Singular Value Decomposition of Machine Speech

Application and verification of a unique separation algorithm for advanced speech signal analysis.

- Noise filtering and reconstruction of speech signal.
- Determination of the Vocal Tract Resonance of speech.
- Diagnosis of polyp in the vocal tract and other abnormalities.
- Development of a framework for continuous speech.

Bulk of the task was simulation based and was performed using the python programming language. The results suggested a robust and computationally efficient method for small natural speech signal analysis.

Implementation of Distant LED to Optical Camera Communication Using Different Coding and Organizational Schemes

A collaborative thesis targeting an improvement in Visible Light Communication (VLC) assessing the effects of various parameters on transfer characteristics, such as Bit Rate and Bit Error Rate.

- Impact analysis of camera technology, i.e., rolling shutter and global shutter.
- Study of variations due to coding schemes (i.e., Manchester) and redundancy.
- Analysis of the effects of LED matrix arrangement and image processing techniques.

Decoding the signal from the camera output is a rigorous image processing task and was performed using openCV in python. The transmitter LED matrix was controlled by Arduino microcontrollers that also perform encoding the data in different ways.
